# Target of study:

# To contribute to prevention of criminal behaviour and aggression in society

- Understand factors and mechanisms that increase the risk for criminal behavior
- Design interventions to decrease criminal behaviour

Bron: HKS, CBS

Quality of society is (partly) determined by the sum of the quality of Social interactions of individuals within society

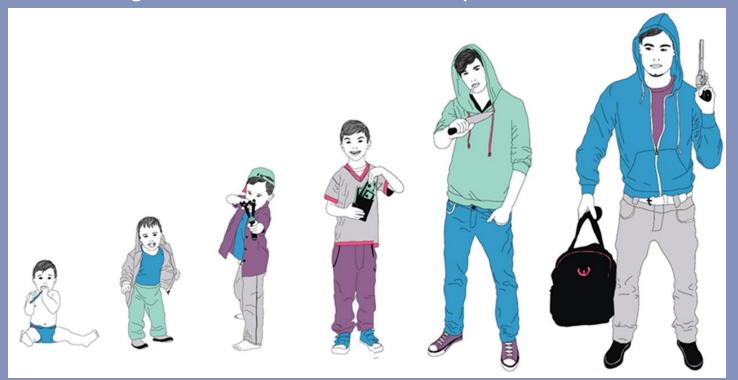

Each child has the challenge of a successful social development according to the rules of our society

## Social adaptation:

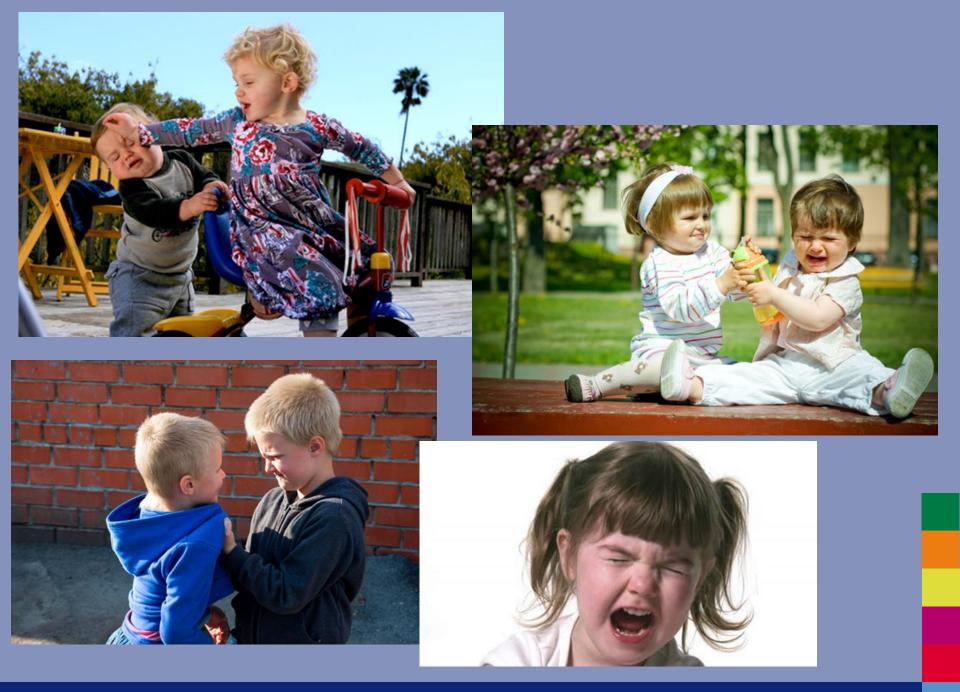

Go for your goals in life with respect For the needs and feelings of other persons

# multifactorial risk model:

## Child factors:

- Early aggression/irritability
- temperament
- Developmental disorders/psychopathology

# Intervention programs so far

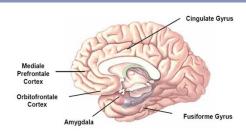

- Often based on presentation of behavior, not knowing the underlying problems in neurocognitive functioning of a child
- Often target parents, although they might not be motivated or able to change

## **Preventive Intervention**

Mission:

To prevent a criminal career in children with high risk we have to:

- 1. Support adequate social development
- 2. Focus on the child factors (brain mechanisms) in social development

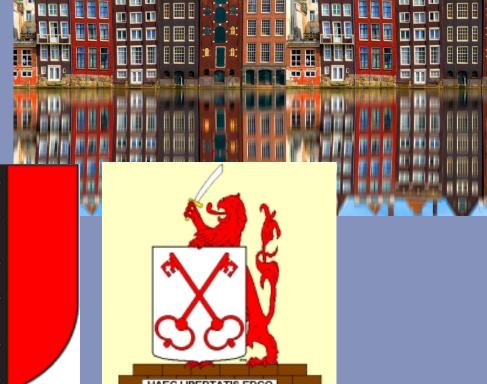

# Preventive Intervention Team Amsterdam - Leiden

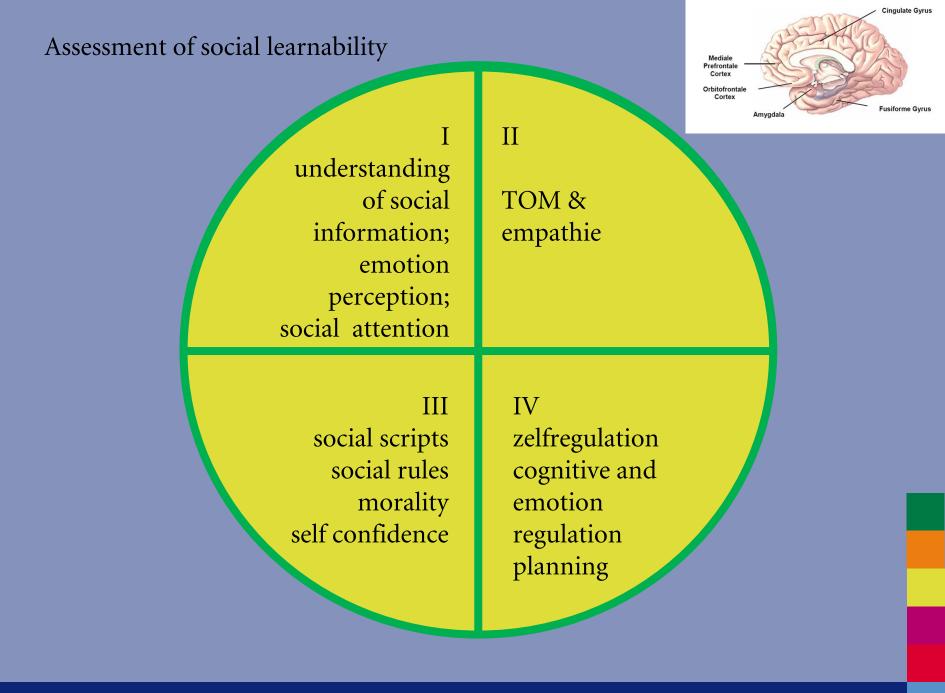

## **Preventive Intervention:**

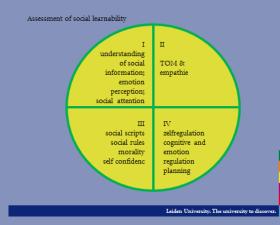

Together with school:

- 1. A coach is assigned to the child and its family
- 2. Intervention is tailor-made, based on the analyses of the individual pattern of relevant neurocognitive and affective (dys)functions in a specific child,
- 3. and supportive of social development, with help of parents and school
- 4. without focus on 'disorder' (no DSM classification) instead on social learning

# Results of the PIT intervention

Assessment on 463 (age 5-18) boys 75%

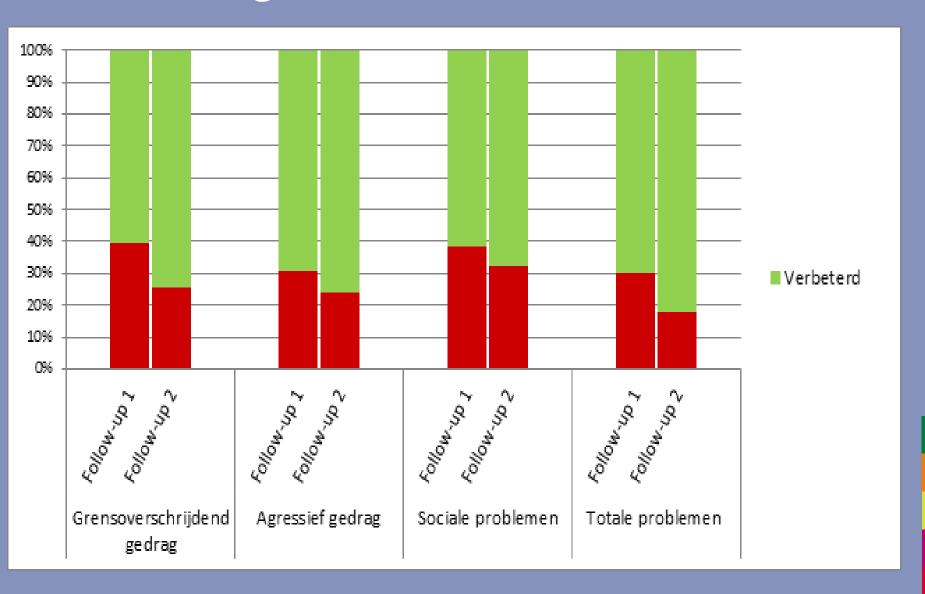

## Agression and rule breaking after 6 months and a year:

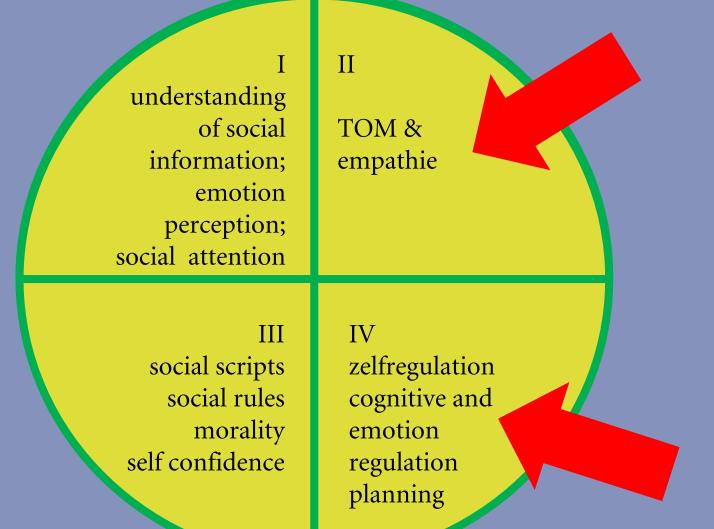

# Percentage succes

## Prediction of success of intervention

## Essentials of the PIT

- 1. Speed: analyses & plan within 4 weeks
- 2. Coach looks after the interventions
- 3. Help is offered without asking!
- 4. Assessment is done at school very accessible
- 5. Tailor-made and high expertise, treatment based on individuel profile of social development
- 6. All-inclusive intervention
- 7. School is the place for the intervention
- 8. Support of social development; no DSM classification
- 9. coach is active director of needs
- 10. Knowledge is growing during treatment

# Conclusion/take home

Child directed tailor-made treatment – based on the individual profile of mechanisms of social development – is rather successful in combination with:

individual coaching for a long time working at & with school
